

For entrants in AY 2020

Appended Form 1

Specifications for Major Program

Name of School (Program) [School of Science (Department of Earth and Planetary Systems Science)]

Program name (Japanese)	地球惑星システム学プログラム
(English)	Earth and Planetary Systems Science
1. Degree to be obtained: Bachelor of Science	
2. Overview	
<p>The School of Science at Hiroshima University aims to educate students to steadily learn the basics of natural science, and to foster acute sensitivity for exploring truth, in order to provide professionals with an integrated ability to make judgments based on broad and deep intelligence.</p> <p>The Earth and Planetary Systems Science Program aims to provide people of talent who have their intellectual base in earth and planetary science and are capable of working as (1) researchers, (2) engineers, and (3) educators in various fields in society. For example, students are expected to become (1) faculty members at a college or researchers in another research institute, (2) civil engineering consultants and engineers in a company related to natural resources, energy, disaster prevention, and information technology, and (3) science teachers in junior and/or senior high schools. In order to educate students to acquire knowledge, specialized skills, and analytic capabilities that cover the wide field of earth and planetary science, and to provide subjects that meet the various interests and characteristics of each student, the program consists of field exercises and graduation research in addition to lectures, practices, and exercises provided as indoor classes.</p> <p>In this program, students study, from the basics to the application, three categories of subjects required for advanced research in earth and planetary systems science, i.e. (1) minerals, rocks, and ores geology; (2) the solar system, the earth, and the emergence and evolution of life; and (3) the motion mechanisms and internal structure of the solid part of the earth and planets. This program is composed as a bottom-up process that works on a year by year basis to enable students to study earth and planetary science from its basics and finally become capable of the application and practice required for state-of-the-art research.</p>	
3. Diploma policy (policy for awarding degrees and goal of the program)	
<p>This program aims to educate students to become people of talent who can work actively, with an international point of view, as researchers, engineers, and educators in fields related to earth and planetary systems science, in which various areas of earth and planetary science are amalgamated. This program will award the degree bachelor of science to students who have acquired the capabilities described below and earned the required credits defined for the educational course:</p> <ul style="list-style-type: none">• The basic knowledge of mathematics, physics, chemistry, biology, and earth and planetary science required for studying a wide variety of areas of earth and planetary systems science;• The basic skills in English and information processing required for studying a wide variety of areas of earth and	

planetary systems science;

- The capability for reading academic documents related to earth and planetary science in Japanese and English, and understanding and examining structures and phenomena from the microscopic to the macroscopic level; and
- The capability for performing specialized research related to earth and planetary systems science, organizing the results into a thesis, and presenting it in English.

4. Curriculum policy (policy for organizing and implementing the curriculum)

This program has been designed to educate students through the study, first of all, of the wide range of basics in earth and planetary systems science that form a fusion of the various areas of the field, before advancing to further specialized areas.

- In the first year, students study subjects to learn a wide range of the basics of mathematics, physics, chemistry, biology, and earth and planetary science in liberal arts education and specialized education. In addition to this, they learn foreign languages, mainly English, and the basics of information processing, in order to acquire the fundamental skills required for studying earth and planetary science. Students also acquire basic knowledge related to geology in liberal arts seminars and field excursions.
- In the second year, in specialized education, students study the basics of geology, physics of earth and planetary interiors, and geo- and cosmochemistry, in order to acquire basic capabilities required for the specialized study of a variety of areas in earth and planetary systems science. Students also acquire skills in basic English that can be immediately useful for specialized areas in the classes that are specifically designed for earth and planetary science. The field excursion is conducted in a different location to that of the first year, to enhance students' knowledge of geology.
- In the third year, students enhance their knowledge and skills in specialized areas through lectures and exercises mainly related to elective subjects for specialized education. Students also acquire skills in intermediate English that can be immediately useful for specialized areas in the classes that are specifically designed for earth and planetary science. They conduct geological surveys and indoor experiments as practice in order to acquire the practical capabilities required for research activities such as observation in the field, data processing, report preparation, and presentation.
- In the fourth year, students are allocated to a laboratory to conduct graduation research on their own topics. They acquire knowledge and skills related to specialized areas through their activities in the laboratory, and develop communication and presentation abilities in seminars and presentation practice.

Academic achievement is evaluated based on grade scores for the subjects, and the level of achievement against the target defined for this program.

5. Start time and acceptance conditions

Students of the Department of Earth and Planetary Science choose this program when they enter our university. There is no problem even if the student did not take a course in geoscience at high school, since the program is designed to allow the student to study earth and planetary systems science from the basics to specialized knowledge in a step-by-step process, starting upon entering the university.

The curriculum is composed with the expectation that students have studied mathematics, physics and chemistry at high school, and they are required to take the specified fundamental subjects in mathematics, physics and chemistry in

their first and second years to understand basics of those subjects.

Requirements for when a student in a department other than the Department of Earth and Planetary Systems Science chooses this program are separately stipulated based on the provisions regarding transfer between schools/departments.

6. Obtainable qualifications

1: Educational personnel certification

(1) Type 1 License for Junior High School Teacher (Science)

(2) Type 1 License for High School Teacher (Science)

2: Curator license

3: Assistant registered surveyor

7. Class subjects and their contents

* For the class subjects, refer to the subject table in Attachment 1.

* For the details of the class subjects, refer to the syllabus that is published for each academic year.

8. Academic achievement

The evaluation criteria are specified for each evaluation item for academic achievement, and the level of achievement against the criteria is designated at the end of the semester.

The evaluation score for each evaluation item is converted to a numerical value (S = 4, A = 3, B = 2, and C = 1) and the evaluation standard for academic achievement, from when the student entered the university to the end of the last semester, is determined using these values while applying weightings. The evaluation standards consist of three levels, i.e. Excellent, Very Good, and Good.

Evaluation of academic achievement	Converted value
S (90 or more points)	4
A (80 – 89 points)	3
B (70 – 79 points)	2
C (60 – 69 points)	1

Academic achievement	Evaluation criteria
Excellent	3.00 – 4.00
Very Good	2.00 – 2.99
Good	1.00 – 1.99

* Refer to the relationship between evaluation items and evaluation criteria described in Attachment 2.

* Refer to the relationship between evaluation items and class subjects described in Attachment 3.

* Refer to the curriculum map in Attachment 4.

9. Graduation thesis (graduation research) (meaning, student allocation, timing, etc.)

1. Meaning

To demonstrate achievement in the bachelor's course as a whole.

2. Timing of student allocation

At the beginning of the fourth academic year. To be allocated to a laboratory, students must satisfy the "Conditions for Starting Graduation Research." For the details, refer to Study Guidance for the Earth and Planetary Science Program in the "Students Handbook" (received when the student enters the university).

3. Method of student allocation

If the number of students who wish to be allocated to each member of faculty varies significantly, the faculty member to which students are allocated for graduation research is determined based on their academic score at the end of the third academic year.

10. Responsibility

(1) Responsibility for PDCA (plan, do, check, and act) cycle

If the number of students who wish to be allocated to each member of faculty varies significantly, the faculty member to which students are allocated for graduation research is determined based on their academic score at the end of the third academic year.

Table of Registration Standards for Earth and Planetary Systems Science Program

Refer to Study Guidance for the Earth and Planetary Systems Science Program for requirements for attending the course.

Students are allowed to take class subjects provided in other programs and schools, and in other universities, in addition to the class subjects listed in this table, and the credit for those subjects that the faculty committee of the Earth and Planetary Systems Science Program certifies is accepted as the required credit for graduation.

* Students who have earned the required credits (refer to the Students Handbook for the details) can acquire the type 1 license for junior high school teacher (science), the type 1 license for senior high school teacher (science), the certification for assistant registered surveyor, and the curator license.

(Liberal Arts Education)

	Experimental Methods and Laboratory Work in Earth Sciences I	1	○												
Experimental Methods and Laboratory Work in Earth Sciences II	1	○													
I and II of the same subject (4 credits) from the 8 subjects above															
Total (Liberal Arts Education Subjects)		34													

(Note 1) The indicated semester represents that in which students typically take the subject. It is permitted to take the subject in the same (first or second) semester in the following year, however, it is required to confirm the details in syllabus for that academic year, because the subject might be provided in a different semester or term.

(Note 2) It is required to earn 4 credits in "Human & Social Science Subjects" and 4 credits in "Natural Science Subjects". Students who want to acquire an educational personnel certification must take the subject "Japanese Constitution" in the "Human & Social Science Subjects".

Credits earned through the subject "Advanced English for Communication", "Foreign Languages: Intensive Studies" and "Overseas Language Seminar (German, French, Spanish, Russian, Chinese, and Korean)" in "Foreign Languages" are accepted as the credits required for "Human & Social Science Subjects".

(Note 3) The credit for "Field Research in the English-speaking World" that is earned through such activities as a short-term study abroad, and that for "Online English Seminar A" and "Online English Seminar B", that is earned through self-study, are accepted as the credit for the subject "Communication I and II".

Achievement in a foreign language skill test might also be accepted as credit. For the details, refer to the description of English subjects in Liberal Arts Education and the item "Credit based on Achievement in Foreign Language Skill Tests" in the Student Handbook.

(Note 4) The credit of the subject "Social Cooperation Courses" is accepted as credit for the category of "Any subject".

* Note for the "Specialized Education Subjects" listed in the next page and after

(Note 5) Only for foreign students, if credits are acquired in any subjects taught in English by any other programs of other faculties (including those of Liberal Arts Education Subjects) after proper course registration, then among these the successfully acquired credits of the registered subjects which are accepted by the faculty committee of the Earth and Planetary Systems Sciences can be included as the required credit units for the graduation.

(Note 6) To achieve the 84 credits required for the "Specialized Subjects", it is required to earn 8 or more credits for elective required subjects and free elective subjects, as well as 52 credits for required subjects and 24 credits for elective required subjects.

(Note 7) To attend the subject "Practice of Earth and Planetary Systems Science A (Field Work)", it is required to earn the credits for "Structural Geology" and "Petrology laboratory".

(Note 8) To attend the subject "Special Study for Graduation", it is required to earn 108 or more credits of the 128 credits required for graduation, including "Practice of Earth and Planetary Systems Science A (Field Work)" and "Practice of Earth and Planetary Systems Science B (Field Work)".

(Note 9) The class of the subject "Surveying" is provided biannually.

(Note 10) The classes of "Special Lectures in Earth and Planetary Systems Science" are provided as an integrated course within a certain period of time (after the 5th semester).

(Note 11) Because 128 credits are required for graduation, it is required to earn 10 or more credits regardless of the categorization of Liberal Arts Education Subjects and Specialized Education Subjects, in addition to the required credits for each subject category (118 credits in total that consist of 34 credits for Liberal Arts Education Subjects and 84 credits for Specialized Education Subjects).

However, the credit for the subjects described below is not accepted as the required credit for graduation: For the details of subjects related to educational personnel certification, refer to the list of required credits in "Acquisition of Educational Personnel Certification" in the Student Handbook.

• Any credit that exceeds 8 credits for "Area Courses"

• Any credit for subjects only related to educational personnel certification

• Credits for "Experiments in General Physics A", "Experiments in Chemistry A", "Laboratory Work in Biology A" and "Experiments in General Geology A"

• "Specialized fundamental subjects" and "Specialized Subjects" provided in another program in another school (except those that are admitted by the faculty committee of Earth and Planetary Systems Science Program)

Academic achievements of Earth and Planetary Systems Science Program

Relationships between the evaluation items and evaluation criteria

Academic achievements		Evaluation criteria			
Evaluation items		Excellent	Very Good	Good	
Knowledge and Understanding	(1)	To acquire knowledge and understanding about the origin and development of the solar system and the earth.	To be able to very thoroughly understand technical knowledge about the birth and development of the solar system and the earth.	To be able to thoroughly understand technical knowledge about the birth and development of the solar system and the earth.	To be able to understand technical knowledge about the birth and development of the solar system and the earth.
	(2)	To acquire understanding and technical knowledge about earthquake phenomena and the earth's internal structure.	To be able to very thoroughly understand technical knowledge about earthquake phenomena and the earth's internal structure.	To be able to thoroughly understand technical knowledge about earthquake phenomena and the earth's internal structure.	To be able to understand technical knowledge about earthquake phenomena and the earth's internal structure.
	(3)	To acquire understanding and technical knowledge about the progress of Earth surface environment and biosphere.	To be able to thoroughly understand technical knowledge about the progress of supracrustal environment and biosphere.	To be able to understand technical knowledge about the progress of the supracrustal environment and biosphere.	To be able to understand technical knowledge about the progress of the supracrustal environment and biosphere.
	(4)	Being able to collect materials by basic ways. Being able to find issues from specific phenomena and explain them. Being able to make clearly arguable discussion and effective presentation.	Being able to collect materials by basic ways, find issues from specific phenomena and explain them and to make clearly arguable discussion and effective presentation very superbly.	Being able to collect materials by basic ways, find issues from specific phenomena and explain them and to make clearly arguable discussion and effective presentation superbly.	Being able to collect materials by basic ways, find issues from specific phenomena and explain them and to make clearly arguable discussion and effective presentation.
	(5)	To be able to express opinions by thinking of peace from multiple perspectives, including understanding various causes and complex aspects which hinder the realization of peace, as well as conflicts between ideal and reality. Also, to be able to explain one's knowledge.	To be able to express opinions by thinking of peace from multiple perspectives, including understanding various causes and complex aspects which hinder the realization of peace, as well as conflicts between ideal and reality. Also, to be able to explain one's knowledge very well.	To be able to express opinions by thinking of peace from multiple perspectives, including understanding various causes and complex aspects which hinder the realization of peace, as well as conflicts between ideal and reality. Also, to be able to explain one's knowledge well.	To be able to express opinions by thinking of peace from multiple perspectives, including understanding various causes and complex aspects which hinder the realization of peace, as well as conflicts between ideal and reality. Also, to be able to explain one's knowledge.
	(6)	To be able to explain historical or modern issues that human and society face (social structure and the way science should be, significance of intellectual activities, and significance of multicultural relations and coexistence with nature) from multiple perspective.	To be able to excellently explain historical or modern issues that human and society face (social structure and the way science should be, significance of intellectual activities, and significance of multicultural relations and coexistence with nature) from multiple perspective.	To be able to explain historical or modern issues that human and society face (social structure and the way science should be, significance of intellectual activities, and significance of multicultural relations and coexistence with nature) from multiple perspective in a good way.	To be able to explain historical or modern issues that human and society face (social structure and the way science should be, significance of intellectual activities, and significance of multicultural relations and coexistence with nature) from multiple perspective.
	(7)	Being able to explain the process of construction and development in each academic discipline. Being able to explain how each academic discipline relates to culture and society.	Being able to explain the process of construction and development of each academic discipline and very superbly explain the relationship between each academic discipline and culture and society.	Being able to explain the process of construction and development of each academic discipline and superbly explain the relationship between each academic discipline and culture and society.	Being able to explain the process of construction and development of each academic discipline and explain the relationship between each academic discipline and culture and society.

Comprehensive Abilities	(1)	Acquire the ability and skills of setting team themes.	Being able to acquire superbly the ability and skills of setting team themes.	Being able to acquire well the ability and skills of setting team themes.	Being able to acquire the ability and skills of setting team themes.	
	(2)	Learning the ability •skills to plan and carry out research plans.	Being able to learn superbly the ability •skills to plan and carry out research plans.	Being able to learn well the ability •skills to plan and carry out research plans.	Being able to learn the ability •skills to plan and carry out research plans.	
	(3)	Having acquiring the ability •skills to compile research results and make the presentation.	Being able to compile research results and make the presentation superbly.	Being able to compile research results and make the presentation well.	Being able to compile research results and make the presentation.	

Placement of Liberal Arts Education in the Major Program

The liberal arts education in this program aims to build the academic foundation required for the specialized education, and develops the capability for autonomous study, and scientific intelligence, based on the ability to collect, analyze, and criticize data. Also, it allows students to establish a point of view for insight into the essentials and background of phenomena, to acquire the linguistic ability and concern for peace which are required of a citizen of the world, to integrate a wide variety of knowledge into a system of intelligence that is truly useful for problem solving, and to acquire the ability to pioneer and promote interdisciplinary and integrated study beyond the existing framework of the academic areas.
