### For entrants in FY 2021

Appended Form 1

#### Specifications for Major Program

Name of School (Program) [School of Pharmaceutical Sciences (Program of Medicinal Sciences)]

| Program name (Japanese) | 薬科学プログラム                      |
|-------------------------|-------------------------------|
| (English)               | Program of Medicinal Sciences |

1. Degree to be obtained: Bachelor of Medicinal Science

#### 2. Overview

The Program of Medicinal Sciences is a four-year course which was established aiming to foster pharmaceutical specialists such as researchers and developers of drugs, providers of medical information, experts in environment/health when the pharmacist training course was transformed into 6-year system and the Program of Pharmaceutical Sciences was newly established in the School of Pharmaceutical Sciences. Based on a broad education not only within the field of the pharmaceutical sciences but also in a range from organic chemistry to life science, this program cultivates researchers in the wide field of life sciences as well as researchers/technicians engaged in drug development. Researches on environmental problems and hygiene are also conducted widely in this program, and students are trained to be researchers/experts handling these subjects through the essential education and research on pharmaceutical sciences as a foundation of research and development on pharmaceuticals. Although these human resources are not necessarily limited only to people from the field of pharmaceutical sciences, this program offers a wide-ranging education from basics to clinical medicine based on not only knowledge acquired from basic education on life sciences, organic chemistry, inorganic chemistry, physical chemistry, and analytical chemistry but also knowledge that can be acquired only from pharmaceutical fields such as pharmacology and pharmaceutics to foster students who can play an active role in various fields with different skills from students completed studies in other fields. The pharmaceutical sciences have cultivated human resources engaged in research, development, and production of pharmaceuticals in Japan. The history and know-hows to nurture such human resources in the 4-year program should be succeeded and developed more.

Besides, such human resources have been insufficient compared to the other countries so that the mission imposed on the four-year course of medicinal sciences is incalculable.

This program aims to foster students who are able to develop a new field of knowledge and contribute to local/global communities having a rich humanity by reinventing themselves looking ahead the future society based on the tradition of the pharmaceutical sciences. Specifically, this program provides students education to allow them to acquire 1) the fundamental knowledge and skills required to develop the strong questioning mind in sciences and motivation for learning; 2) the advanced skills required for exercising their creative thinking abilities to try to solve new problems actively and autonomously; and 3) the advanced and the wide-ranging knowledge and skills on pharmaceutical and medical sciences required to become researchers/technicians on drug development, biomedical innovators, providers of advanced medical information, experts in environment/health who are able to work globally as well.

Expecting students to be researchers/experts with global prospective in the public agencies or industries such as

pharmaceuticals, foods chemicals and cosmetics after graduation, this program fosters students to be able to lead the society as researchers at the forefront after acquiring the advanced knowledge and skills in graduate school.

In the first step after admission (Attached Sheet 1), students take liberal arts education subjects necessary for a special course education and develop broad knowledge necessary for their future character-building, such common subjects with the Program of Pharmaceutical Sciences as fundamental subjects, information literacy basics and seminars, and foreign languages focusing on communication. Also, the first step is designed to allow students to participate in the "Early Joint Experience Practice."

Furthermore, science classes for supplemental education that student did not chose for their individual scholastic ability tests are also prepared.

In the second step, set as the basis of education in pharmaceutical sciences, students will take basic specialized subjects in line with the common educational models and core curricula in pharmaceutical sciences in the program in Pharmaceutical Sciences. At the same time, students will acquire the basics of experimenting by completing practices in all the fields of pharmaceutical sciences starting from basic chemical practice. In the third step, more specialized lectures are arranged and allocated as elective subjects so that students can acquire the knowledge required for pharmaceutical sciences to become their field of expertise in the future. In the fourth step, to take part in research in their desired field of expertise, students will select graduation research from Basic Research I, II, and III by being allocated into each laboratory. Student's requests are respected for the allocation. This graduation research is an introduction to conducting advanced research in a graduate school at a later date, in which the class content is taken into consideration so that students can acquire sufficient knowledge and skills. During the fourth step, Lecture of Program of Pharmaceutical Sciences will be allowed to choose the related lectures.

The student who chose a program by English for finding employment in foreign countries can meet completion requirements by choosing "B" in the language column of the syllabus.

#### 3. Diploma policy (policy for awarding degrees and goal of the program)

The Program of Pharmaceutical Science will approve the graduation of, and award the degree Bachelor (medicinal sciences) to, students who have acquired the capabilities described below, and earned the required credits defined for the educational course:

- 1) The fundamental abilities on subjects required for learning pharmaceutical sciences such as physics, chemistry, biology and ethics as well as wide-ranging liberal arts;
- 2) The fundamental knowledge and skills regarding such things as major reactions, separation methods, structure determination methods, that are required for understanding the properties of chemical substances including medicines and biological materials, and the ability to explain and exercise that knowledge and those skills;
- 3) The fundamental knowledge and skills regarding the structure and mechanisms of function coordination in living bodies that are required for understanding the constitution of the living body at various levels, such as the individual body, an organ in the body, and a cell in the organ, and ability to explain and exercise that knowledge and those skills;
- 4) The fundamental knowledge, skills, and attitude regarding such matters as the effect of a medicine on a disease, mechanisms of action, and metabolic end result that are required for understanding the processes of the pharmacological action of medicines, and the ability to explain and exercise that knowledge, those skills, and that attitude:

- 5) The basic knowledge about drug treatment and the ability to explain it;
- 6) Fundamental knowledge, skills, and attitude regarding the effect of medicines and chemical substances on a human being and the effect of living environment and global ecosystem on human health, and the ability to explain and exercise that knowledge, and those skills;
- 7) The ability to the identify the problem and show the direction toward that solution in order to play an active role as a passionate researcher who can flexibly meet diversifying social needs;
- 8) The fundamental capability to identify new information and knowledge, and to autonomously improve one's ability, in order to keep up with progress in pharmacology, science, and medical areas;
- 4. Curriculum policies (policies for organizing & providing curricula)

In the Program of Medicinal Sciences, curricula are planned based on the following policies with the aim of developing scientists and engineers with an enriched humanity and broad education based on its educational principles:

- 1) To allow students to acquire fundamental knowledge and basic study ability in a wide variety of areas, the curriculum provides the peace study subjects, fundamental subjects for university education, disciplinary subjects, foreign language subjects, information and data science subjects, health and sports subjects, society-related subjects, and fundamental subjects, structured in such a way as to provide those subjects to the whole university;
- 2) To allow students to systematically learn the specialized methodology and knowledge, the curriculum provides subjects for early experience, humanism in communication, the structure and characteristics of materials, natural medicine resources, and the mechanisms and functionality of living bodies as specialized fundamental subjects;
- 3) Set subjects related to effects of medical supplies, internal kinetics of medical supplies, health & environment, adjustment of preparations & management of medical supplies, illness and disease states, operations of a pharmacist, pharmaceutical affairs-related laws and regulations, and experimental techniques as specialized subjects for students to choose from to foster the expertise required to achieve their career aims,
- 4) Set graduation research as a required subject and provide detailed individual guidance to enable students to integrate the knowledge and skills they have acquired, and to foster scientific thinking that will be linked to the solution of problems and creation of new values,
- 5) Establish a certain standard for assignment to a laboratory,
- 6) The achievement in education is evaluated based on grade scores for the subjects, and the level of achievement against the target defined for the Program of Medicinal Sciences.
- 7) Certain criteria are established for the allocation of students to laboratories, and for qualification for Type-1 High School Teaching License (science);
- 5. Start time and acceptance conditions

Students select (start) this program in the first year.

- 6. Obtainable qualifications
  - a) Type-1 High School Teaching License (science)
  - b) Drug distributors, engineers responsible for medical equipment manufacturers and import & sales offices, technical managers of garbage disposal facilities, pollution control managers related to noise, dust, and vibration, engineers controlling environmental hygiene in buildings, and managers of water supply technologies

#### 7. Class subjects and their contents

For class subjects, refer to the subject table in Sheet 1. (The subject table is to be attached.)

For the details of the class subjects, refer to the syllabus that is published each academic year.

#### 8. Academic achievement

The evaluation criteria are specified for each evaluation item for academic achievement, and the achievement level against these criteria is designated for each academic year.

The academic achievement, from when the student enters our university to the end of the last semester, is represented based on the average of evaluation scores for each evaluation item. The evaluation score for each subject is converted to a numerical value (S = 4, A = 3, B = 2, and C = 1) and the evaluation standard for the academic achievement is determined using these values while applying weightings.

| Achievement evaluation          | Numerical conversion |
|---------------------------------|----------------------|
| S (Excellent:90 or more points) | 4                    |
| A (Very good: 80 - 89 points)   | 3                    |
| B (Good: 70 - 79 points)        | 2                    |
| C (Passed: 60 - 69 points)      | 1                    |
| Academic achievement            | Evaluation standard  |
| Excellent                       | 3.00 - 4.00          |
| Very Good                       | 2.00 - 2.99          |
| Good                            | 1.00 - 1.99          |

<sup>\*</sup> Refer to the relationship between evaluation items and evaluation criteria described in Sheet 2.

#### 9. Graduation thesis (graduation research) (meaning, student allocation, timing, etc.)

While acquiring a series of research methods working in the society through their graduation research, students continue to graduate school to do pharmaceutical researches more deeply and establish the foundation of a sequence of the research as a basis to be worldwide researchers. Students are allocated to the laboratories to cover all related fields based on the laboratories' conveniences because the overemphasis on a specific field is regarded as not beneficial for the development of pharmaceutical sciences. The allocation method and requirements are defined separately.

<sup>\*</sup> Refer to the relationship between evaluation items and class subjects described in Sheet 3.

<sup>\*</sup> Refer to the curriculum map in Sheet 4.

#### 10. Responsibility

- (1) PDCA responsibility system ("Plan," "Do," "Check," and "Act")
  - "Plan" and "Do" shall be conducted by the Faculty Council of Pharmaceutical Sciences (Chief: Teruo Kuroda (in charge of academic affairs)).
  - "Check" and "Act" shall be conducted by the dean of the School of Pharmaceutical Sciences, respecting the contents of the report after the dean consults with the committee in charge.

#### (2) Program assessment

· Criteria for program assessment

The educational and social effects of this program will be assessed. For the educational effect, the program's effect on students' learning will be judged based on the evaluation of their academic achievements, evaluation of their attainment levels, and GPA. For the social effect, the social availability of this program will be judged.

• Implementing the assessment (relationship with class assessment will also count.)

Achievements in this program will be assessed based on these criteria in the second semester of the fourth year. At the same time, a questionnaire on program assessment will be distributed each semester. Students' program assessments from the questionnaire will be added to the program assessment conducted every year.

The educational effect shall be assessed in a comprehensive manner based on the evaluations of academic achievement and the achievement levels of students who have studied on this program, and GPA.

A social assessment shall be conducted by checking the employment rates in companies (such as medical supply, chemical, food, and cosmetic companies) and government offices that are closely related to the content of the program. At regular intervals, we ask students' main employers to assess the program. We then ask graduates to assess themselves and the program.

· The idea and method of feedback for students

At regular intervals, the faculty council in charge distributes questionnaires to and holds interviews with students to inspect and assess the program, and submits an improvement plan for the program to the Educational Evaluation Committee and the resulting Improvement Report to the Bachelor Course Meeting. Based on students' assessment of classes and the program assessment, class subjects in this program are checked and assessed, and the results are used to improve the program. These results are fed back to students through "Momiji." Comments from students in the questionnaire on class assessment will be fed back for every class through the Momiji questionnaire on class assessment.

- Note 1: The indicated semester represents that in which students typically take the subject. If they have failed to earn the credit in the semester, it is allowed to take the subject after the semester. It is required to confirm the semester in which the subject is provided in the class schedule for liberal arts education subjects that is published every academic year, because some subjects might be provided in a semester other than that which is shown in this document.
- than that which is shown in this document.

  Note 2: The credits for "Field Research in the English-speaking World" that are earned through such activities as a short-term study abroad, and those for "Online English Seminar A" and "Online English Seminar B" that are earned through a program of self-study, are accepted as the credit for English required for graduation (6 credits). Achievement in a foreign language skill test and language training might be accepted as credit. For the details, refer to the description regarding English subjects in the liberal arts education and the item "Credit based on Achievement in Foreign Language Skill Test" in the Students Handbook.
- Note 3: Although 4 credits of "Basic Foreign Language" are not included as those required for graduation, it is recommended to earn those credits.
- Note 4: It is required to take the subject "Introduction to Information and Data Sciences" that is provided in the first year. Only when failing to earn the credit for "Introduction to Information and Data Sciences" is the credit for the subject "Exercise in Information Literacy" accepted as that for the information and data science subjects required for graduation (2 credits).
- Note 5: It is required to take the subject "Psychology for Medical Care Workers" that is provided in the first year.

  Only when failing to earn the credit for "Psychology for Medical Care Workers" is the credit for the subject
  "Psychology A" or "Psychology B" accepted as that for the information subjects required for graduation (2 credits).
- Note 6: Students who did not take the subject "Physics" in the Common Test for University Admissions are required to take the subject "Foundation physics for life science."
- Note 7: Students who did not take the subject "Biology" in the Common Test for University Admissions are required to take the subject "Foundation biology for life science."
- Note 8: Of the 4 credits required for the disciplinary subjects (Courses in Arts and Humanities/SocialSciences), 2 credits are required to be earned for the subject "Ethics."
  - In order to obtain an Educational Staff License, students must complete the "Japanese Constitution" in the area subjects and "Introduction to Earth and Planetary Sciences A" and "Introduction to Earth and Planetary Sciences B" in the Specialized Education of other faculties.

Note: You need at least 1 credit per subject in Elective/Required Subjects I, and at least 8 credits from 4 subjects in Elective/Required Subjects II.

Note: Subjects with a circle in the "Year in which the subject is taken" column are required subjects.

The standard is more than 70%.</li> </ol>   | <ol> <li>Being able to conduct activity measurement methods of presented enzyme.</li> <li>Being able to conduct ways to measure activation and secretion of presented physiological active substances.</li> <li>The learning attainment level is calculated as an average evaluation of grades based on designated formulae. The standard is more than 60%.</li> </ol>   |
|                         | (7) | Being able to collect assess information on medicine.   | 1  | <ol> <li>Being able to find out necessary information on medicine and to estimate them.</li> <li>The learning attainment level is calculated as an average evaluation of grades based on designated formulae. The standard is more than 70%.</li> </ol>  | <ol> <li>Being able to find out necessary information.</li> <li>The learning attainment level is calculated as an average evaluation of grades based on designated formulae. The standard is more than 60%.</li> </ol>   |
| Attitudes               | (1) | Having ability to act as member of a research team.   | 1. Being able to lead a team actively acting as a member of the team. 2. The learning attainment level is calculated as an average evaluation of grades based on designated formulae. The standard is more than 80%.   | <ol> <li>Being able to actively act as a member of a research team.</li> <li>The learning attainment level is calculated as an average evaluation of grades based on designated formulae. The standard is more than 70%.</li> </ol>  | <ol> <li>Being able to act as a member of a research team.</li> <li>The learning attainment level is calculated as an average evaluation of grades based on designated formulae. The standard is more than 60%.</li> </ol>   |
| Comprehensive Abilities | (1) | <ol> <li>The active attitude of dealing with issues on drug development and environmental hygiene.</li> <li>The social responsibility as a specialist of drug development and environmental hygiene.</li> <li>The comprehensive, scientific and calm attitude to solve problems.</li> <li>The cooperative attitude in team research.</li> <li>The ability to make communication and presentation.</li> <li>The ability of assessment and analysis.</li> <li>The active usage of information technology and the management ability.</li> <li>The ethical consideration toward genetically modified foods and animal experiments</li> </ol> | 7. Being able to propose the next research issues based on their own   | 6. Being able to integrate the results in reports or theses. 7. The learning attainment level is comprehensively calculated based on designated formulae combining average evaluation of grades and results  | <ol> <li>Being able to investigate and estimate the research results on issues so far.</li> <li>Being able to select must-be-solved issues for the attainment of goals.</li> <li>Being able to carry out research based on experiment plans of proposed issues.</li> <li>Being able to integrate the results, consider them and present them.</li> <li>Being able to integrate the results in theses.</li> <li>The learning attainment level is comprehensively calculated based on designated formulae combining average evaluation of grades and results of graduation research. The standard is more than 60%.</li> </ol>   |

## Placement of Liberal Arts Education in the Major Program

Liberal arts education in this Program shall play a role in establishing the academic base to receive specialized education, and is placed as education for cultivating scientific thinking on the basis of respect for a voluntary and independent attitude, and of information gathering capabilities, analytical capabilities, and critical power. Furthermore, it is expected through the liberal arts education of this Program to develop a problem-solving ability, to cultivate a linguistic ability, and to strengthen interest in matters related to peace. Through these processes, students will foster an enriched humanity, and acquire a broader education.

# Relationships between the evaluation items and class subjects(Program of Medicinal Sciences)
