## For entrants in AY 2023

Appended Form 1

Specifications for Major Program<br>Name of School (Program) 〔School of Engineering Cluster 1(Mechanical Systems, Transportation, Material and Energy)]

|  |  |
| :---: | :---: |
|  | Program of Mechanical Systems En |
| 1. Academic Degree to be Acquired : Bachelor's degree in Engineering |  |
| 2. Overview |  |
| (1) Overview of "English-based Bachelor's Degree Program" |  |
| This program aims to foster and produce future members of a global society who have the knowledge to be innovative, creative, take leadership, and possess language abilities that will help them play an important role in the international world. |  |
| This program focuses specifically on producing individuals who are capable of addressing various global issues from an engineering perspective and contribute to the creation of new and valuable solutions that are significant to both the industrial and academic societies. |  |
| Students enrolled in the program will begin the curriculum from the first semester of their first year. In the second year, students will set off on their major programs and take the designated courses which are offered at each cluster. Major program overview is as (2). |  |
| (2) Overview of "Program of Mechanical Systems Engineering" |  |
| This program offers education in the fundamentals of mechanical system engineering, the structure and function |  |
| concepts, computer-aided d the principles of the design | the principles of the design and production of new mechanical systems through intelligent numerical simulation and |
| information processing, as well as basic fields such as the mechanics of materials, the dynamics of vibrations, system controls, and other fields. By offering such education, it aims to develop engineers who, having a broader |  |
| perspective on human-machine relations and environmental issues, are able to assume cutting-edge design and development roles in production engineering. In order to provide an efficient and integrated education, the teachers |  |
| belonging to the academic society (Science and Engineering Field, Machine Engineering/Science and Technology |  |
| Unit) are in charge of education for this program. Students are assigned to this program in the second semester of the second year. Then, in the first semester of the fourth year, students are assigned to their respective research laboratories, choose their research topics, and write up their graduation theses. |  |
| Around sixty percent of graduates from this program will advance to graduate school. Graduates are employed in the general machinery and automotive fields, as well as in electronics, information \& communications, heavy |  |
| industry, the chemical industry, and a broad range of other industries. Centering on manufacturers in the fields of heavy industry, transportation equipment, machinery, and materials, they work actively in the fields of R\&D, design, |  |
|  |  |

## 3. Academic Awards Policy (Goals of the Program and Policy for Awarding Degrees)

The Program of Mechanical Systems Engineering develops professionals capable of taking action and displaying great humanity and rationality, who can contribute to the peace, development, and survival of humankind, and to the realization of happiness while striving for co-existence with nature.

Based upon the above, this program awards a bachelor's degree in engineering to students who have acquired the following abilities in a balanced manner, as well as the number of credits necessary to meet the standard of the course.

- Acquisition of the fundamentals of mechanical system engineering, the structure and function of mechanical
system and the principles of the design and processing of mechanical systems based on new concepts, computer-aided design (CAE and CAD), measurement and control technology, mechatronics technology, the principles of the design and production of new mechanical systems through intelligent numerical simulation and information processing, as well as basic fields such as the mechanics of materials, the dynamics of vibrations, system controls, and other fields.
- The ability to assume roles in the design and development of cutting-edge production technology, while having a broader perspective about human-machine relations and environmental issues.

4. Curriculum Policy (Policy for Preparing \& Implementing Curriculum )

To ensure that students are able to achieve the goals of the program, the program develops and puts into practice a curriculum based on the following policy:
. The Program offers not only basic mechanical education but also specialized education in the structure and function of mechanical systems and the principles of the design and processing of mechanical systems based on new concepts, computer-aided design (CAE and CAD), measurement and control technology, mechatronics technology, and the principles of the design and production of new mechanical systems through intelligent numerical simulation and information processing.

- In the first year, the students take Liberal Arts Education subjects such as Peace Science Courses, Basic Courses in University Education, common subjects, and Foundation Courses, as well as specialized basic subjects and specialized practical education, such as machine shop training.
- In the first semester of the second year, the students take the specialized basic subjects that are important, together with subjects common to Cluster 1 such as "Mechanics of Materials I" and "Fluid Dynamics I". Then, from the second semester, the students take specialized subjects, such as highly professional subjects related to advanced technology that reflect the characteristics of this program, and subjects related to integrated systems technology.
- In the third year, specialized subjects become major subjects, and the students take subjects required for this program. The program tries, as far as possible, not to allocate multiple specialized subjects to the same time-slot, allowing students to take specialized subjects provided by other programs in Cluster 1 according to their personal interests.
- In the fourth year, the students are assigned to their respective research laboratories, choose their research topics, and write their graduation theses.
In the curriculum described above, teaching and learning will be implemented by utilizing active learning and online classes, depending on the delivery methods of the program, such as lectures and seminars.
In addition to strict grading using the standards clearly outlined in the syllabus, learning outcomes are evaluated based on the degree to which the goals set by the educational program are achieved.

5. Program Timing/Acceptance Conditions

- When to start the program

The English-based Bachelor's Degree programs begin in the first semester of the first year. Enrollment in Program of Mechanical Systems Engineering occurs in the second semester of the second year.
-Additional Requirements
To determine acceptance into the English-based Bachelor's Degree program, all applicants are required to have an individual consultation with the faculty committee members.

- Credit Requirements

By the first semester of the second year, students must have acquired the Liberal Arts Education subjects and specialized basic subjects that are commonly specified in Cluster 1.
6. Qualifications to be Acquired

Type-1 High School Teaching License (Industry)
(Students must acquire the required number of credits for the Type-1 High School Teaching License (Industry), in addition to the required number of credits for this program.)

## 7. Class subjects and course content

* For class subjects, see the Course List table on the attached sheet.
* For course content, see the syllabus for each fiscal year.
* All class subjects are taught in Japanese. Course materials will be written in both Japanese and English or only English.

8. Academic Achievements

At the end of each semester, the evaluation criteria are applied to each academic achievement evaluation item so that the level of attainment is clearly demonstrated. Students' grade calculation for each subject, from admission to the current semester, is given in one of three levels: "Excellent," "Very Good," and "Good," based on evaluation criteria calculated by adding the weighted values to the numerically-converted values of their academic achievement in each subject being evaluated $(S=4, A=3, B=2$, and $C=1)$.

| Evaluation of academic | Converted values |  |  |
| :---: | :---: | :---: | :---: |
| achievement |  | Academic achievement | Evaluation criteria |
| S(Excellent: 90 points or higher) | 4 |  |  |
| A(Superior:80-89 points) | 3 | Excellent | $3.00 \sim 4.00$ |
| B(Good: 70-79 points) | 2 | Very Good | $2.00 \sim 2.99$ |
| C(Fair: 60-69 points) | 1 | Good | $1.00 \sim 1.99$ |

* For the relationship between evaluation items and evaluation criteria, see the attached Sheet 2 .
* For the relationship between evaluation items and class subjects, see the attached Sheet 3.
* For the curriculum map, see the attached Sheet 4.

9. Graduation Thesis (Graduation Work) (Positioning, When and how it is assigned, etc.)

- Positioning

The graduation thesis is designed to be one component of the overall evaluation of academic achievement.
It is positioned as one of the major subjects to evaluate the following:
Ability/Skills (2) Developing the ability to solve engineering issues on one's own initiative with flexible thinking and creativity

Collective capacity (1) Developing communication skills and the ability to globally collect and dispatch information.

- When and how it is assigned
oWhen it is assigned: At the start of the fourth year. (Only those who satisfy the conditions for embarking on a graduation thesis will be assigned a thesis.)
Conditions for embarking on a graduation thesis
(1) Students must gain 43 credits or more out of 46 credits, the required number for graduation in Liberal Arts Education subjects.
(2) Students must gain 10 credits or more in the first group of specialized basic subjects
(3) Students must gain all of the required credits in Machine Design and Drawing, CAD, Machine Shop Training, Experiments in Mechanical Engineering, and Mechanical Engineering Design and Production.
(4)Students must gain 11 credits or more out of 15 credits, the required number in Liberal Arts Education subjects, in the second group of specialized basic subjects.
(5) Students must gain a total of 68 credits or more in specialized basic subjects and specialized subjects.
- How it is assigned

The research details of each laboratory to which the students can be assigned are explained by giving out handouts at a briefing held in February, in the second semester of the third year. After the number of students acceptable to each laboratory is given at the start of the fourth year, students who can begin their graduation theses are assigned as requested. In the case that the number of students exceeds the acceptable limit for a laboratory, adjustments may be made.

The graduation thesis must be written in English in "English-based Bachelor's Degree Program".

## 10. Responsibility-taking System

## (1) PDCA Responsibility-taking System ("Plan," "Do," "Check," and "Act")

The cluster leader and program leader are responsible for executing this program. Faculty committee members responsible for this program make plans, while self-check/evaluation committee members responsible for this
program make evaluations. The cluster and program teachers committee scrutinize the plans and evaluations from time to time for further improvement. When major issues arise, a working group may be established at the discretion of cluster leader and program leader.
(2) Program assessment

- Criteria for program assessment
- Whether or not each class subject is properly allocated in light of the goals of the program, and whether course content is appropriate
- Whether or not, on average, students taking the course have achieved or exceeded the goals
- Whether or not the system runs in proper cycles that enable the continuous improvement of the program
- How the program is assessed
- Conducting self-assessment for each subject based on class improvement questionnaires from students who have taken course, and based on performance rating results
- Conducting questionnaires (obtained at graduation) in suitable cycles, to evaluate the validity of the goals - Position on feedback to students and how it should be conducted

Search records of each student's learning status, prepared by tutors, are kept.
Based on these records, study guidance is given to each student. At the same time, requests from students are discussed at teachers' meetings as needed. Furthermore, based on the results of the course improvement questionnaires obtained from students, subject teachers draw up class improvement plans that reflect the questionnaire results.

## Sheet 2

## Academic Achievements in Educational Program for Mechanical Systems Engin <br> The Relationship between Evaluation Items and Evaluation Criteria

|  |  | Academic Achievements | Evaluation Criteria |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Evaluation Items | Excellent | Very Good | Good |
|  | (1) | To develop the ability to work positively and independently on the development of local societies, international society, and business and industries. | To be able to be sufficiently engaged in the development of local societies, international society, and business and industry. | To be able to be engaged in the development of local societies, international society, and business and industry at the standard level. | To be able to be engaged in the development of local societies, international society, and business and industry at the minimum level |
|  | (2) | Acquiring necessary basic knowledge for an engineer and developing the ability to consider logically. | Acquiring necessary basic knowledge for an engineer and being able to sufficiently and logically consider it. | Acquiring necessary basic knowledge for an engineer and being able to logically consider it at the standard level. | Acquiring necessary basic knowledge for an engineer and being able to logically consider it at the minimum level. |
|  | (1) | Acquring basis of mechanical system engineering steadily and developing the applied skill. | Acquring basis of mechanical system engineering steadily, and being able to apply it sufficiently. | Acquring basis of mechanical system engineering steadily, and being able to apply it at the standard level. | Acquring basis of mechanical system engineering steadily, and being able to apply it at the minimum level. |
|  | (2) | Developing the ability of solving the technological issues with flexible ideas and creativity. | Based on flexible ideas and creativity, to be able to sufficiently solve problems related to engineering. | Based on flexible ideas and creativity, to be able to independently solve problems related to engineering to the standard level. | Based on flexible ideas and creativity, to be able to independently solve problems related to engineering at the minimum level. |
|  | (1) | Cultivating abilities of communication and of internationally collecting information and releasing it | To be able to communicate sufficiently with others, collect and release information internationally. | To be able to communicate with others, collect and release information internationally at the standard level | To be able to communicate with others, collect and release information internationally at the minimum level. |

## Placement of the Liberal Arts Education in the Maior Program

We aim to cultivate a well-rounded character, backed up by a broad range of basic knowledge and an understanding of global environmental issues and problems in the
 and between nature and engineering. To that end, the following are offered: (1) The acquisition of the necessary abilities and attitudes to see various social issues multilaterally and to understand the complete picture (2) The acquisition of a broader perspective after being exposed to fields outside of one's area of expertise (3)
 machine engineers in society, and to solve ethical problems
