

THE 262ND IDEC ASIA SEMINAR

DOES CORRUPTION PAY IN INDONESIA? IF SO, WHO ARE BENEFITED THE MOST?

Lecturer : Dr. Rimawan Pradiptyo

Department of Economics, Faculty of Economics and Business
Universitas Gadjah Mada, Indonesia

Date : December 11, 2013 (Wednesday)

Time : 16:20 – 17:50

Venue : Large Conference Room, IDEC

Abstract

This seminar will focus on the discrepancies in sentencing corruptors by judges in Indonesia's judicial system, based on the recent data. The defendants have been classified into five groups depending on their scales of corruptions. Logistic and Tobin's logistic (TOBIT) regressions have been used to analyse both the likelihood and the intensity of sentencing offenders, respectively, with particular punishments. The results show that the probability and the intensity of sentencing across various types of punishment may not necessary corresponds to the scale of corruptions. Offenders who committed petty and small scales corruption tend to be punished more severely than their medium, large and grand corruptors.
